

Figure S1. Overview of sequencing analysis. (A) Rarefaction curves analysis. (B) Rank-abundance curves analysis. The curves tended to be stable, indicating that species representation in each sample approached the plateau phase and the sequencing quantity was reasonable. (C) Venn diagrams of the core and unique OTUs of TW0mg, TW10mg and TW40mg groups (following SV treatment for 2 weeks), and (D) Venn diagrams of the core and unique OTUs of FW0mg, FW10mg and FW40mg groups (following SV treatment for 4 weeks). OTU, operational taxonomic unit; SV, simvastatin; TW, 2-week SV treatment; FW, 4-week SV treatment.

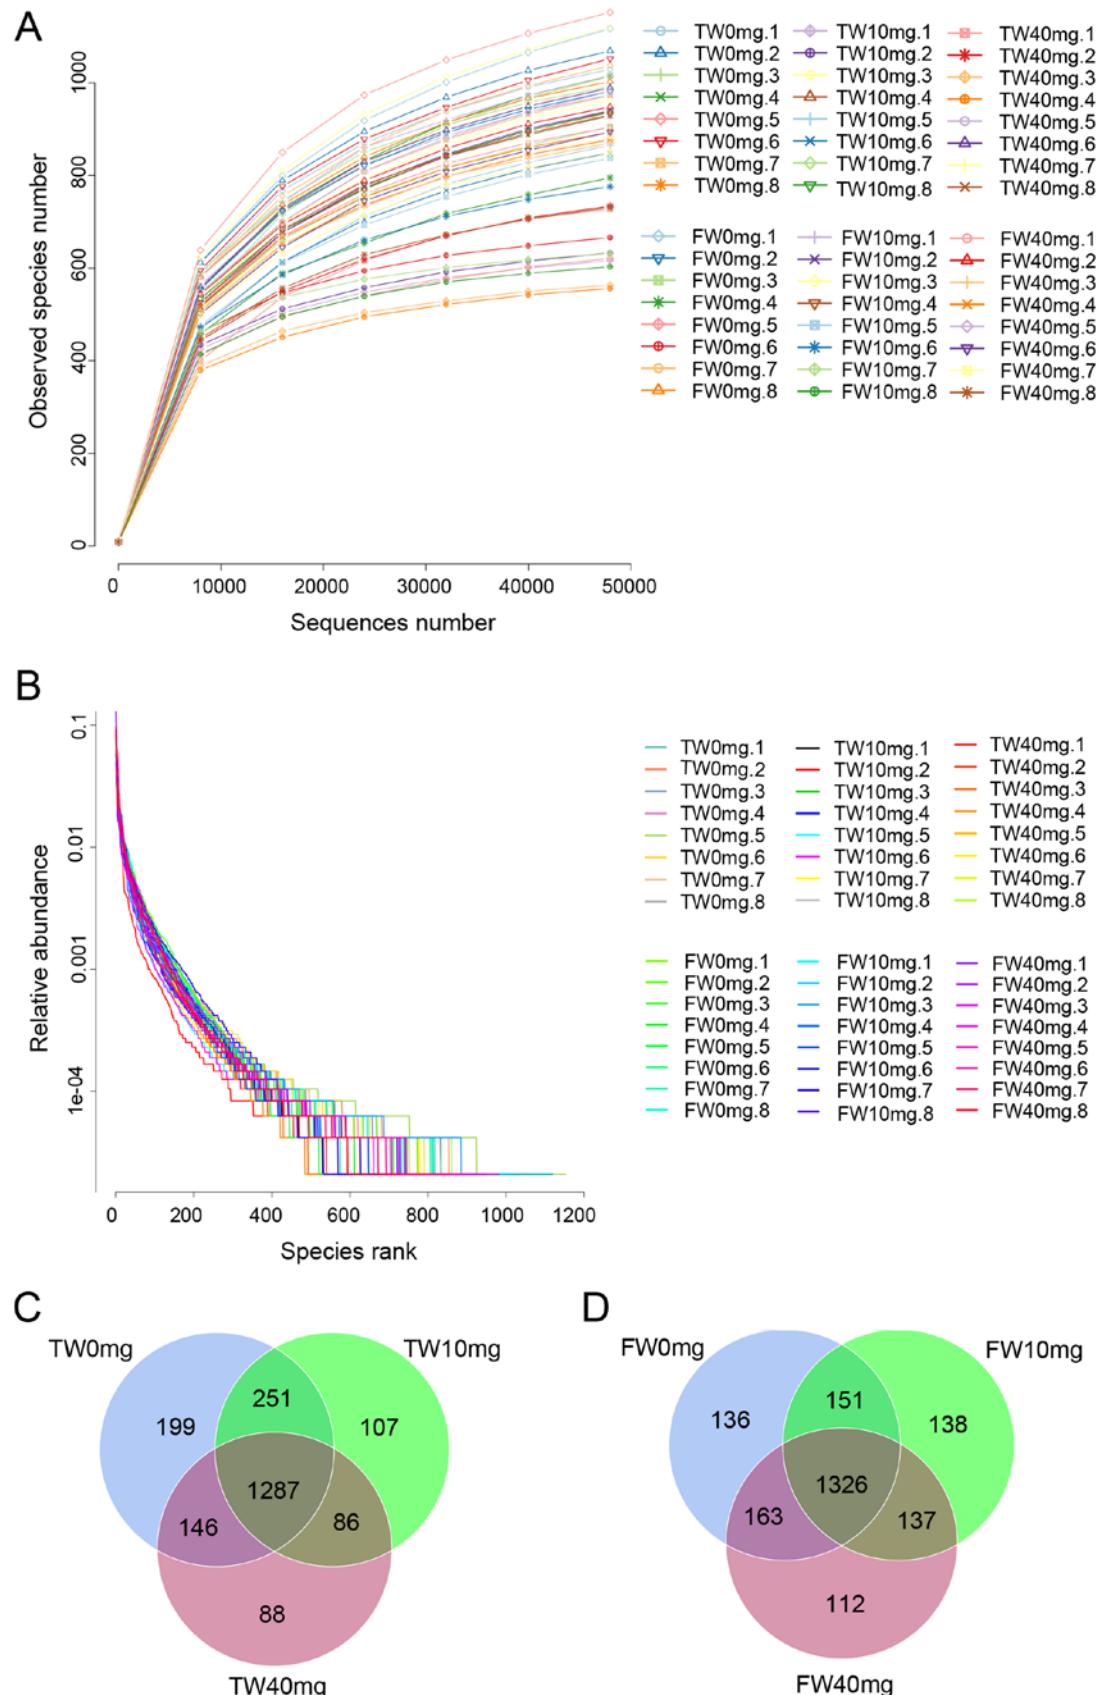

Figure S2. Analysis of similarities test to compare R values among different groups. (A) TW0mg vs. TW10mg. (B) TW0mg vs. TW40mg. (C) FW0mg vs. FW10mg. (D) FW0mg vs. FW40mg. The R value was considered well separated if >0 . Significance was considered at $P<0.05$. TW, 2-week SV treatment; FW, 4-week SV treatment.

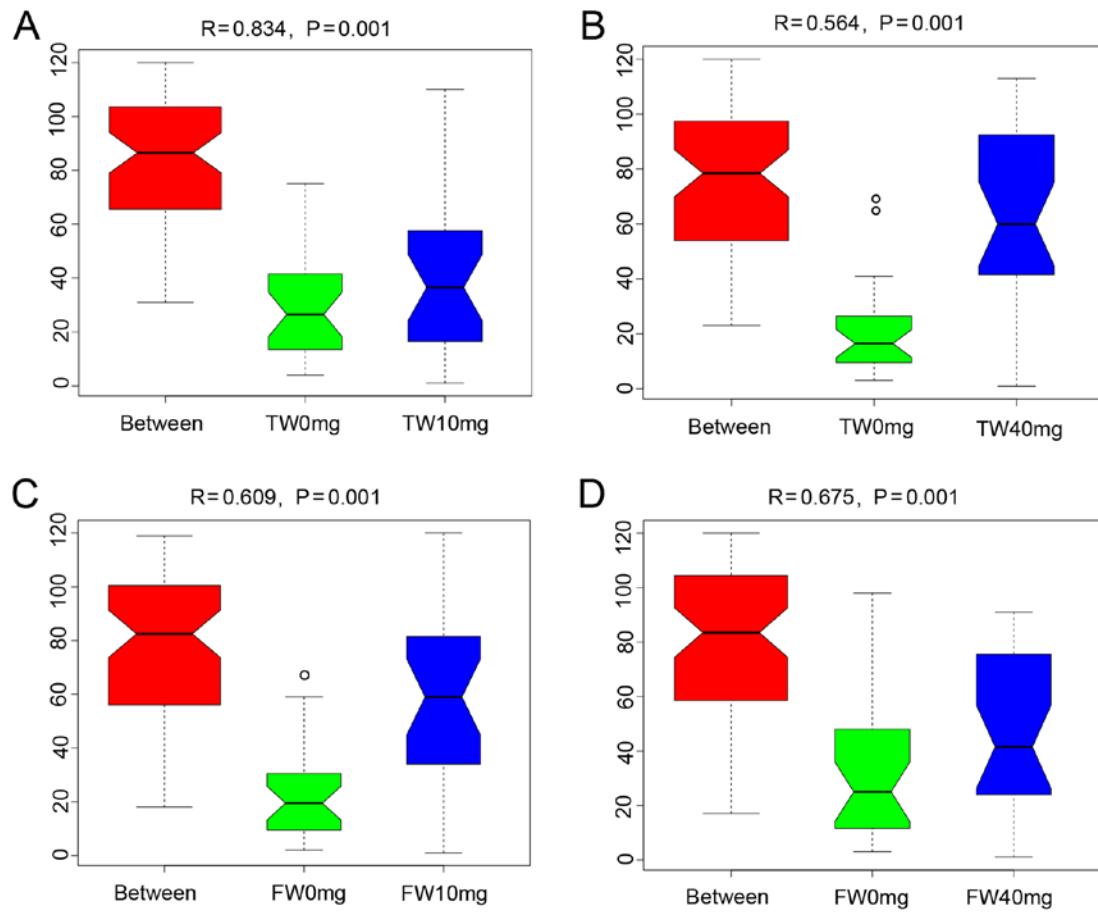

Table SI. Numbers of observed OTUs, depth of sequencing and α -diversity indices values of each sample.

Total	4,082,278	48,600						0.996
Average								

A total of 4,082,278 raw sequences were generated and assigned to a total of 48,600 OTUs based on 97% similarity. The α diversity indices values (Shannon, Simpson, ACE, Chao 1, goods_coverage) of each rat are provided in the table. OTU, operational taxonomic unit; ACE, abundance-based coverage estimator; TW, 2-week SV treatment; FW, 4-week SV treatment.

Table SII. Relative abundances of the predominant taxa profiles in the gut microbiota of rats.
