

Figure S1. Marked BMP9 expression is mediated by Ad-BMP9-infected HCT116 producer cells. Ad-BMP9 and Ad-GFP were used to infect HCT116 cells for 36 h. Total RNA was isolated for TqPCR analysis to assess the expression of BMP9. All samples were normalized with respective *GAPDH* expression levels. Fold changes were calculated by dividing the qPCR expression values from the Ad-BMP9 treatment group by that from the Ad-GFP control group. Each assay condition was performed in triplicate. \*\*P<0.01 vs. Ad-GFP group. BMP9, bone morphogenic protein 9; Ad, adenovirus; GFP, green fluorescent protein.

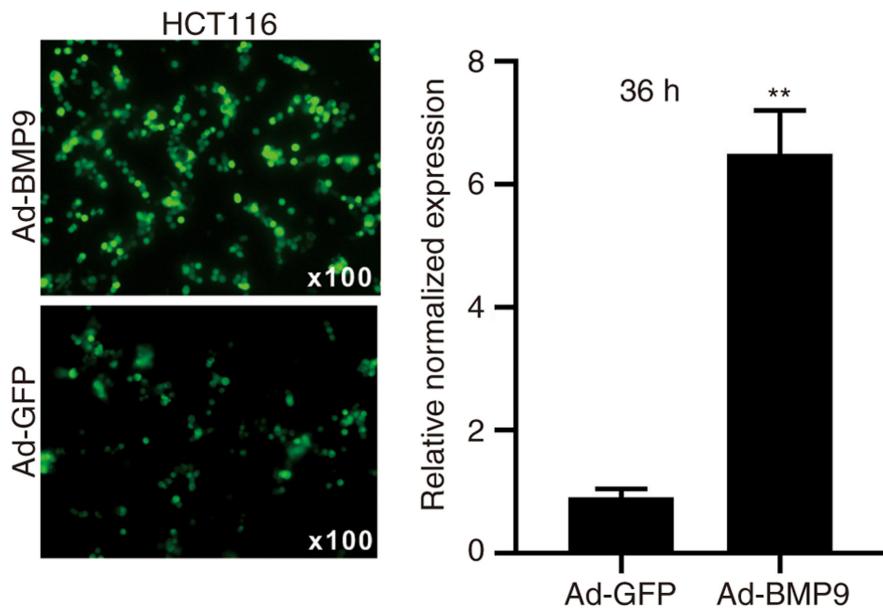

Table SI. List of touchdown quantitative polymerase chain reaction primers.
